

1. What is electromagnetic radiation?

2. Can you give some examples of types of electromagnetic radiation that you encounter in your daily life? (visible light is one type)

3. What properties are used to describe e/m radiation? (What's the difference between the types of e/m radiation you gave in Q 2?)

4. What models/theories/ideas do you know about that are used to explain the behavior of e/m radiation?
